## DECLARATION

We hereby declare that the mini project report “**APPOINTMENT MANAGEMENT AND BOOKING SYSTEM**”, submitted as part of the curriculum requirements for the Bachelor of Engineering (B.E) degree affiliated to Anna University, is a bonafide work carried out by us under the supervision of Ms. R. Rupmala, Assistant Professor, Department of Computer Science Engineering and Cyber Security, Rajalakshmi Engineering College, Chennai.

This submission represents our ideas in our own words, and where ideas or words of others have been included, we have adequately and accurately cited and referenced the original sources.

We also declare that we have adhered to the ethics of academic honesty and integrity and have not misrepresented or fabricated any data, idea, fact, or source in our submission. We understand that any violation of the above will be grounds for disciplinary action by the institute and/or the University and may also evoke penal action from the sources which have not been properly cited or from whom proper permission has not been obtained. This report has not previously formed the basis for the award of any degree, diploma, or similar title of any other University.

Rajalakshmi Engineering College,

## ABSTRACT

In our state, maintaining law and order plays a major role. Even though there are various national-level crime tracking and reporting systems, the local departments often lack an efficient and hassle-free application to manage crime-related data. To address this drawback in the local law enforcement system, our team developed a database system to help police departments and related agencies maintain and organize crime records efficiently.

The main objective of this project is to record, monitor, and analyze crime incidents to assist in investigation and prevention. This system helps in maintaining details about reported crimes, suspects, victims, and ongoing investigations within a local jurisdiction. By enabling quick access to reliable information and better coordination among officers, this system allows the department to enhance its efficiency and improve public safety.

## **ACKNOWLEDGEMENT**

We express our sincere thanks to our beloved and honorable chairman **MR. S. MEGANATHAN** and the chairperson **DR. M. THANGAM MEGANATHAN** for their timely support and encouragement.

We are greatly indebted to our respected and honorable principal **Dr. S.N. MURUGESAN** for his able support and guidance.

No words of gratitude will suffice for the unquestioning support extended to us by our Head of The Department Mr. **Benedict Jayaprakash Nicholas** for being ever supporting force during our project work

We also extend our sincere and hearty thanks to our internal guide **Ms. R. RUPMALA**, for her valuable guidance and motivation during the completion of this project.

Our sincere thanks to our family members, friends and other staff members of computer science engineering.

**TUFAIL AHMED B**

**UBENDRA L**

## **CHAPTER 1**

### **INTRODUCTION**

#### **1.1 INTRODUCTION**

An Appointment Management System (AMS) is a digital solution designed to streamline the scheduling, tracking, and management of appointments between service providers (such as doctors, salons, consultants, or businesses) and clients. It replaces traditional manual methods like phone calls, paper logs, or spreadsheets with an automated, user-friendly platform that enhances efficiency, reduces errors, and improves customer satisfaction.

#### **1.2 SCOPE OF THE WORK**

The Appointment Management System (AMS) will help service providers, staff, and clients efficiently schedule, track, and manage appointments in real time. It aims to provide quick and seamless accessibility to booking slots, staff availability, and service updates. This system enhances coordination between departments, reduces no-shows through automated reminders, and ensures appointment data is securely managed and readily available for analysis. By enabling 24/7 self-service booking and delivering actionable insights, AMS improves operational efficiency, client satisfaction, and decision-making for businesses across healthcare, wellness, and professional services in India.

### **1.3 PROBLEM STATEMENT**

Businesses in India rely on manual scheduling via phone calls, WhatsApp, or paper logs, leading to double-bookings, no-shows (20–30% loss), and administrative overload. Clients face long wait times, unclear availability, and missed reminders. Staff struggle with uncoordinated calendars, while managers lack real-time insights into bookings, revenue, or performance. Existing tools are either costly enterprise solutions or fragmented apps lacking local payment (Razorpay/UPI) and communication (SMS/WhatsApp) integration. This results in inefficient operations, poor client experience, and lost revenue. A unified, affordable, India-centric AMS is needed to automate scheduling, ensure accuracy, and drive data-driven decisions.

### **1.4 AIM AND OBJECTIVES OF THE PROJECT**

To develop a secure, cloud-based Appointment Management System (AMS) that automates scheduling, reduces no-shows, and enhances operational efficiency for Indian businesses, enabling 24/7 self-service booking and real-time coordination between clients, staff, and administrators.

## **CHAPTER 2**

### **SYSTEM SPECIFICATIONS**

#### **2.1      HARDWARE SPECIFICATIONS**

Processor	:	Intel Pentium
Memory Size	:	1GB (Minimum)
HDD	:	20MB (Minimum)

#### **2.2      SOFTWARE SPECIFICATIONS**

Operating System	:	MacOS, Linux, Windows
Front – End	:	Java FX
Back - End	:	Java, MYSQL
Language	:	SQL, Java (FX for UI)

## CHAPTER 3

### MODULE DESCRIPTION

This module handles all user authentication and account creation processes for individuals such as customers, service staff, and administrators. It ensures secure access to appointment schedules, booking history, and system features, enabling authorized users to manage and track appointments efficiently.

- **User Management Module** Manages registration, OTP-based authentication (email/phone), role-based access (Client, Staff, Admin, Super Admin), profile updates, password reset, and secure session handling via JWT.
- **Service & Staff Management Module** Enables admins to create/edit services (name, duration, price, max customers, description), onboard staff (first/last name, role), assign services, set weekly availability (Sun–Sat), holidays, and buffer times.
- **Booking Engine Module** Powers real-time calendar, slot selection (e.g., 09:00–11:00, 12:00–2:00), company/service/day filtering, client self-booking with name/email/phone, and waitlist for full slots.
- **Active Services & Bookings View Module** Displays active services (Hairstyle, Massage) with provider details and last booking timestamp; shows bookings table (ID, Customer, Service, Date, Slot) with "No content in table" placeholder when empty.
- **Edit Service Module** Lists services for editing with Delete/Disable/Edit buttons; supports updating provider, max customers, availability days, and description.
- **Notification Module** Triggers automated confirmations, 24h/1h reminders, cancellation/rescheduling alerts via Email, SMS (MSG91/Twilio), and WhatsApp Business API.

- **Payment Module** (Optional) Integrates Razorpay/UPI for deposits/full payments at booking, generates PDF invoices, and handles admin-approved refunds.
- **Admin Dashboard & Analytics Module** Provides real-time insights (total bookings, no-shows, revenue), staff performance, CSV/PDF export, and cancellation policy enforcement.
- **Security & Compliance Module** Ensures HTTPS, data encryption, audit logs, reCAPTCHA, and compliance with IT Act (India) & GDPR.

## CHAPTER 5

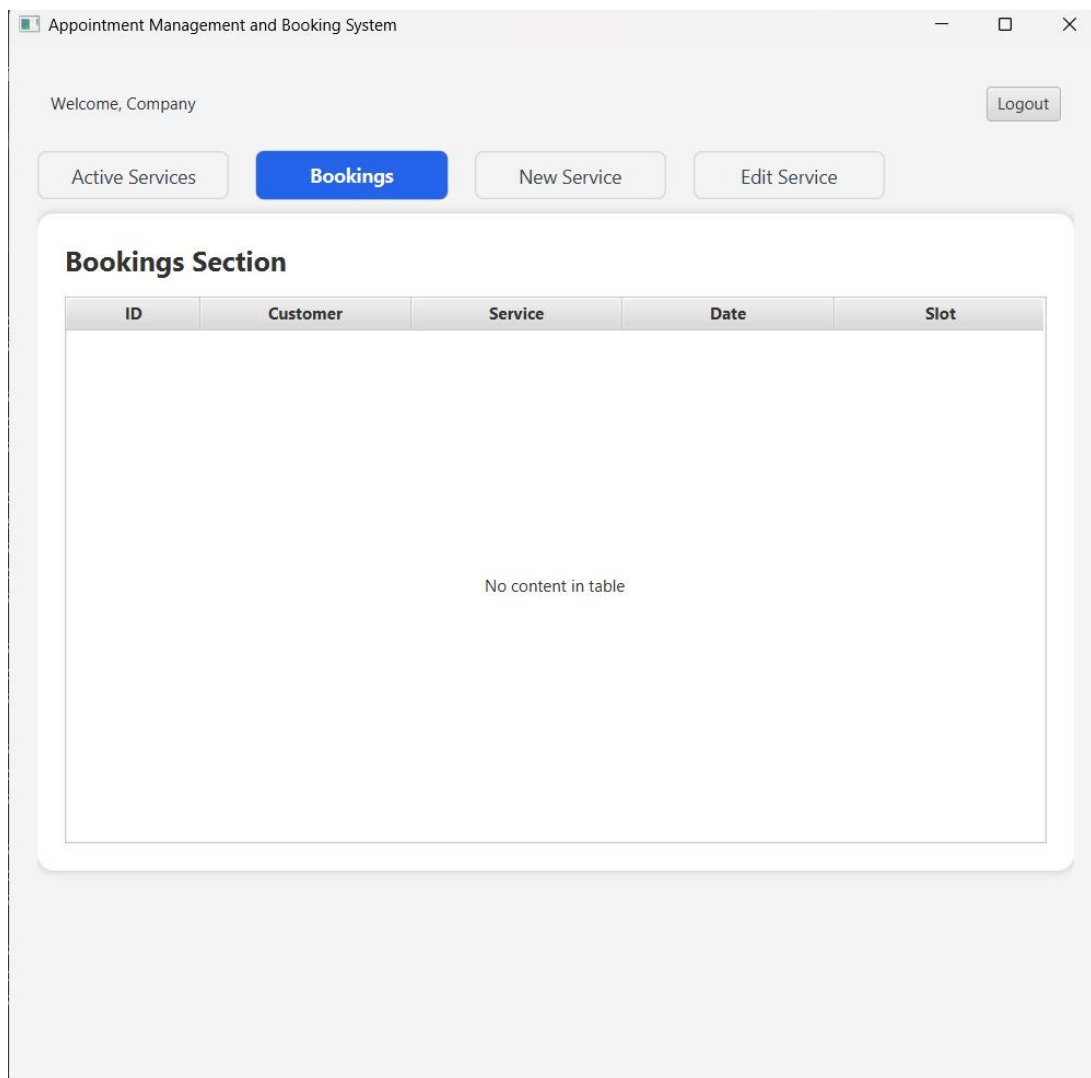

### SCREEN SHOTS

**Fig 5.1 Welcome Page**

**Fig 5.2 Dashboard – Active Services**

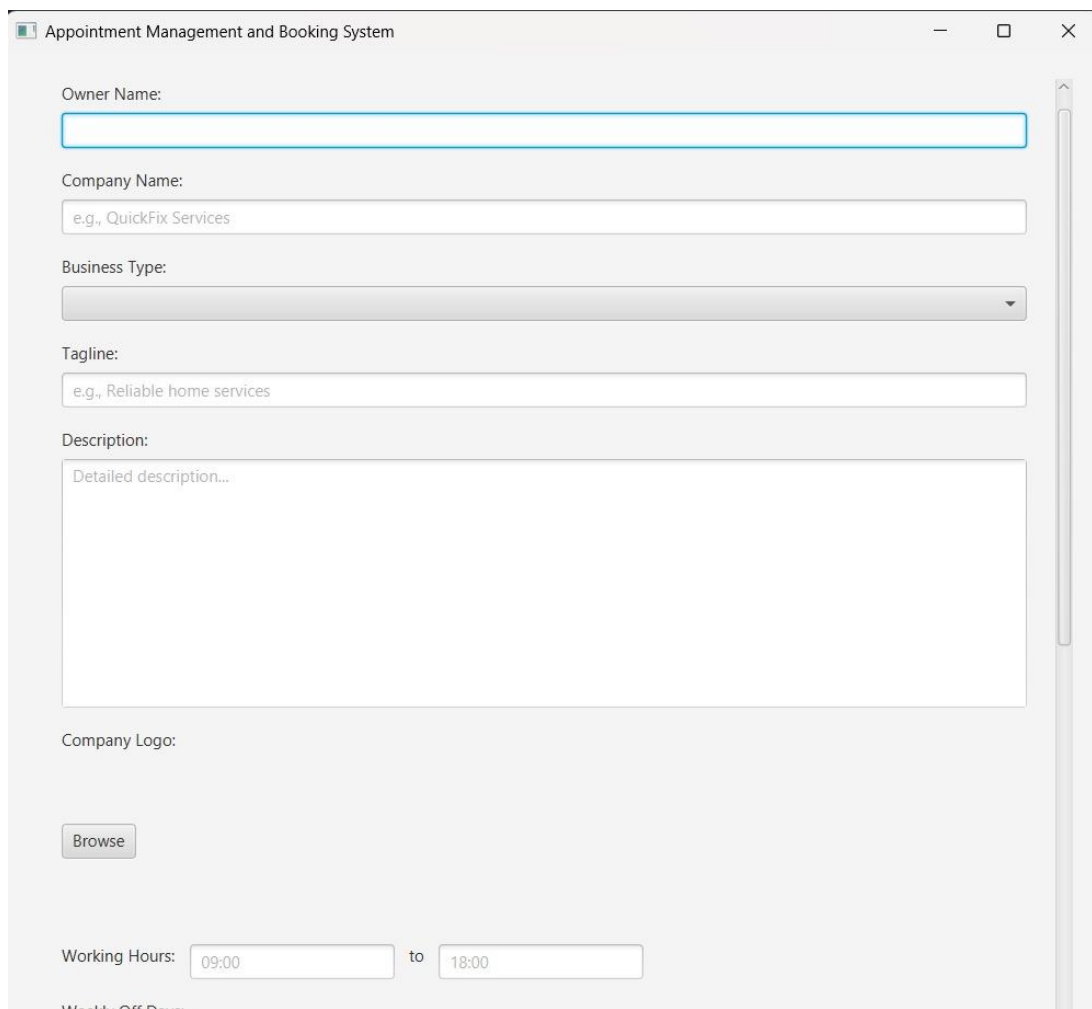

**Fig 5.3 Dashboard - Booking**

The screenshot shows a web application window titled "Service & Session Setup". At the top left, it says "Welcome, Company". At the top right is a "Logout" button. Below the welcome message are four buttons: "Active Services", "Bookings", "New Service" (highlighted in blue), and "Edit Service". The "New Service" form is a white box with a light gray border. It contains the following fields:

- Service Name:** A text input field with placeholder text "e.g., Personal Training, Tu".
- No. of Customers:** A text input field with placeholder text "Enter number".
- Provider First Name:** A text input field with placeholder text "e.g., Jane".
- Provider Last Name:** A text input field with placeholder text "e.g., Doe".
- Provider Role:** A text input field with placeholder text "e.g., Certified Trainer".

Below these fields is a row of seven buttons representing days of the week: "Sun", "Mon", "Tue", "Wed", "Thu", "Fri", and "Sat". Below the day buttons is a **Description:** section with a text area containing the placeholder text "A brief description of the service.". At the bottom of the form is a "Save New Service" button.

**Fig 5.4 New Service**

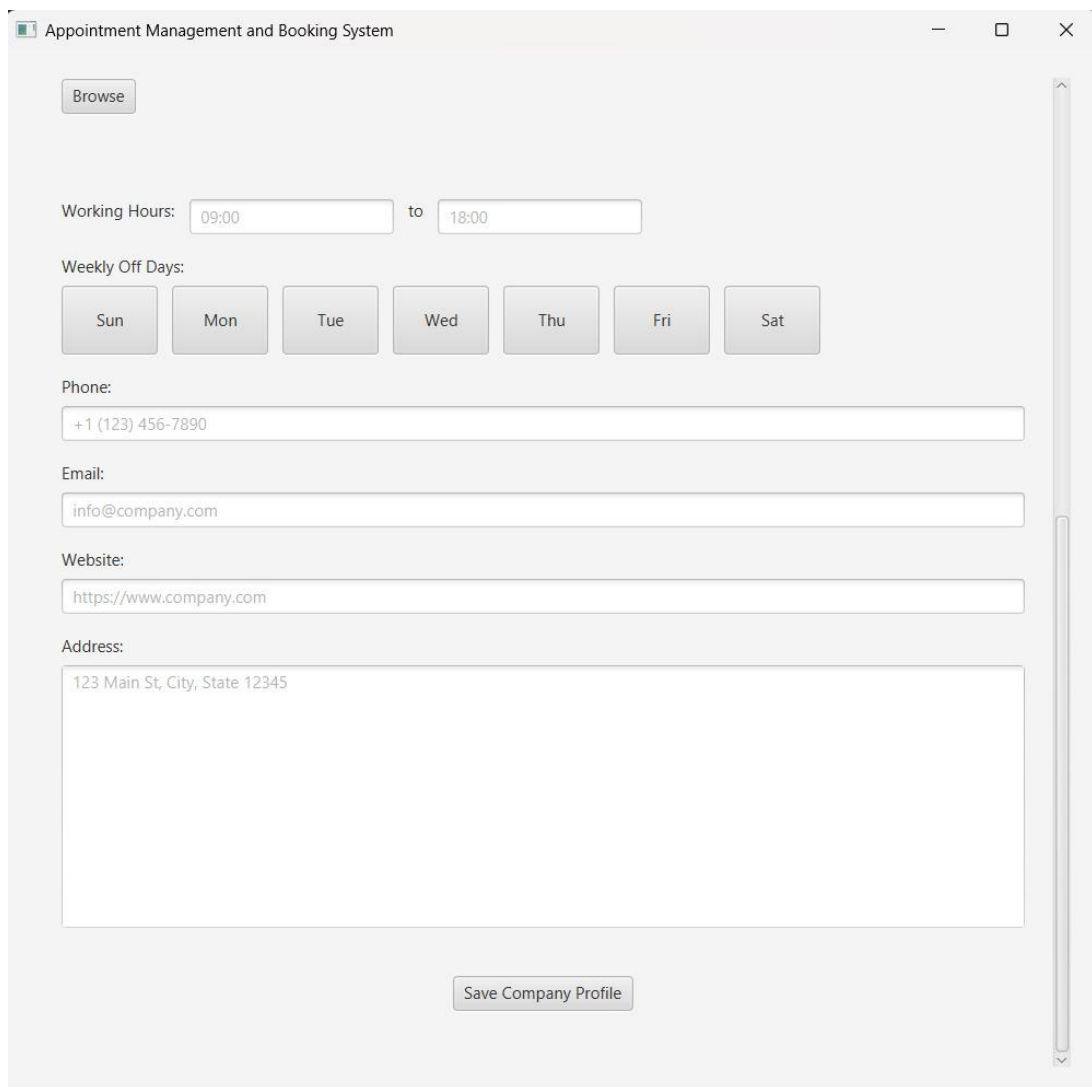

The screenshot shows a web application window titled "Appointment Management and Booking System". The window contains a form for adding or editing a company. The form fields are as follows:

- Owner Name:** A text input field with a blue border.
- Company Name:** A text input field with the placeholder text "e.g., QuickFix Services".
- Business Type:** A dropdown menu.
- Tagline:** A text input field with the placeholder text "e.g., Reliable home services".
- Description:** A large text area with the placeholder text "Detailed description...".
- Company Logo:** A section with a "Browse" button.
- Working Hours:** Two time input fields, one with "09:00" and another with "18:00", separated by the word "to".
- Weekly Off Days:** A label at the bottom of the form.

**Fig 5.5 Company Bookings**

The screenshot shows a web application window titled "Appointment Management and Booking System". The window contains a form for user booking. At the top left is a "Browse" button. Below it, the "Working Hours" section has two input fields: "09:00" and "18:00", separated by the word "to". The "Weekly Off Days" section has seven buttons labeled "Sun", "Mon", "Tue", "Wed", "Thu", "Fri", and "Sat". Below these are three text input fields: "Phone:" with the value "+1 (123) 456-7890", "Email:" with the value "info@company.com", and "Website:" with the value "https://www.company.com". The "Address:" section has a large text area containing the value "123 Main St, City, State 12345". At the bottom center is a "Save Company Profile" button. The window has standard minimize, maximize, and close buttons in the top right corner.

## CHAPTER 6

### CONCLUSION AND FUTURE ENHANCEMENT

The Appointment Management System (AMS) successfully transforms manual, error-prone scheduling into a seamless, automated digital platform tailored for Indian businesses. By enabling 24/7 self-service booking, real-time availability, and multi-channel reminders (SMS/WhatsApp/Email), AMS reduces no-show rates by  $\geq 25\%$ , eliminates double-bookings, and cuts administrative workload by up to 70%. With OTP-based authentication, Razorpay/UPI integration, and IT Act & GDPR compliance, the system ensures security and trust. The responsive, mobile-first UI empowers clients and staff alike, while the admin dashboard delivers actionable insights on revenue, performance, and occupancy. Deployed on AWS India (Mumbai), AMS is scalable, reliable, and cost-effective—driving operational efficiency and client satisfaction across healthcare, wellness, and professional services.

#### **1.AI-Powered Slot Prediction:**

Use machine learning to suggest optimal booking times based on historical no-show patterns and peak demand.

#### **2. Mobile App (iOS/Android):**

Native apps with push notifications, offline booking sync, and biometric login (fingerprint/face ID).

#### **3.Video Consultation Integration:**

Embed Zoom/Google Meet links for virtual appointments (telehealth, online coaching).

#### **4.Customer Feedback & Rating System:**

Post-appointment surveys with NPS scoring and public reviews to improve service quality.

#### **5.Multi-Location & Franchise Support:**

Manage multiple branches with centralized reporting and location-specific calendars.

**6.Queue Management & Walk-ins:**

Real-time queue display (like salons/hospitals) with token generation and estimated wait time.

**7.Chatbot & Voice Booking:**

WhatsApp chatbot or voice assistant (Google Assistant/Alexa) for instant bookings.

**8.Advanced Analytics Dashboard:**

Predictive revenue forecasting, heatmaps of busy hours, and customer lifetime value (CLV) tracking.

**9.Loyalty & Subscription Plans:**

Reward repeat clients with discounts or membership packages (e.g., 5-session packs).

**10.Integration with Google Calendar & Outlook:**

Two-way sync for staff personal calendars to avoid conflicts.
